Python Custom Exceptions

Defining Custom Exceptions

```
class CustomError(Exception):
    ...
    pass

try:
   ...

except CustomError:
    ...
```

Example: Python User-Defined Exception

```
# define Python user-defined exceptions
class InvalidAgeException(Exception):
    "Raised when the input value is less than 18"
    pass

# you need to guess this number
number = 18

try:
    input_num = int(input("Enter a number: "))
    if input_num < number:
        raise InvalidAgeException
    else:
        print("Eligible to Vote")

except InvalidAgeException:
    print("Exception occurred: Invalid Age")
```

```
Enter a number: 4
Exception occurred: Invalid Age
```

Customizing Exception Classes

```
class SalaryNotInRangeError(Exception):
    """Exception raised for errors in the input salary.

    Attributes:
        salary -- input salary which caused the error
        message -- explanation of the error
    """

    def __init__(self, salary, message="Salary is not in (5000, 15000) range"):
        self.salary = salary
        self.message = message
```

```
        super().__init__(self.message)

salary = int(input("Enter salary amount: "))
if not 5000 < salary < 15000:
    raise SalaryNotInRangeError(salary)
```

```
Enter salary amount: 6000
```
