```python
# Task 6

# Find square root of real or complex numbers
# Importing the complex math module
import cmath

num = 1+2j

# To take input from the user
#num = eval(input('Enter a number: '))

num_sqrt = cmath.sqrt(num)
print('The square root of {0} is {1:0.3f}+{2:0.3f}j'.format(num
,num_sqrt.real,num_sqrt.imag))
```

```
The square root of (1+2j) is 1.272+0.786j
```
